

Complete racks with tube frames available from stock in three popular styles -ball, flush and square. Units come standard in 16" and 23" glass holder lengths. Units can be built with overall lengths and leg lengths as required. Lacquered brass or chrome finishes available from stock. Stainless steel finish and other special finishes available upon request. We also can manufacture to your own design specifications.

When designing your stemware system, the height from the floor to the glass sliders (rods) is important. Height from floor to sliders should be approximately 78" but not over 80", (these dimensions assume staff of average height). BRASCON will fabricate your rack to the appropriate overall height (minimum 5 1/2"). Sliders come in 2 standard lengths of 16" and 23". Illustrated above is the typical GRB style ball rack. Distance to the outside of flanges is 19" for 16" sliders and 26" for 23" sliders. Flanges are 3" in diameter.

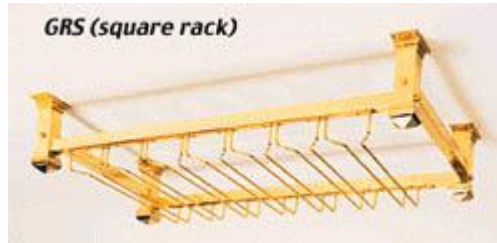

**GRA (slider assembly)**

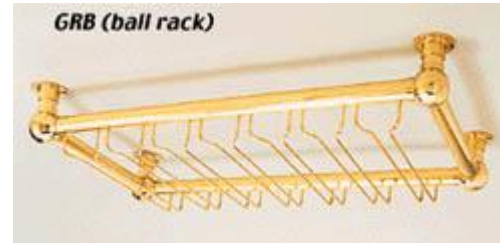

**GRI (individual slider)**

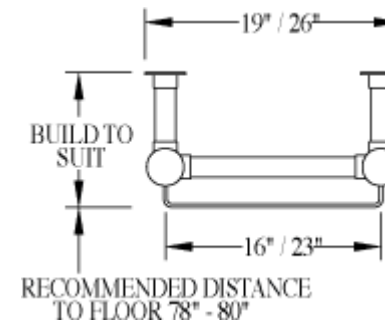

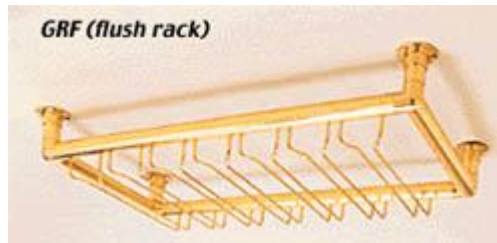

**GRS (square rack)**

**GRB (ball rack)**

**GRF (flush rack)**
